Experience

• Senior Frontend Developer — GameAddik *2020 – 2026*

Agency specializing in video game marketing. Worked mainly on GameRebellion, an analytics dashboard for game studios, within a 4-person frontend team.

- Built the GameRebellion analytics dashboard in Next.js, TypeScript and Tailwind CSS, including reusable component systems, based on specifications from the design team.
- Built and maintained a REST API in NestJS (MongoDB, AWS Athena) for analytics data, coordinating across the frontend and backend repositories (linked PRs whenever the API contract changed).
- Took part in a two-tier code review process (peer + lead), Cypress testing and pre-launch visual QA: multiple viewports, loading, error and empty states.
- Rebuilt GameAddik's corporate website on WordPress, and contributed to the GameRebellion website and to showcase sites promoting video games.
- Accessibility work in code, notably keyboard navigation, and technical SEO built into the integration (meta tags, headings, internal linking, alt text).
- Designed and coded an HTML email newsletter, from Figma to email implementation.
- Wrote documentation covering the frontend process and our PostHog analytics setup.

Tech: React 19, Next.js 16, TypeScript, Tailwind CSS, React Query, WordPress, NestJS, MongoDB, AWS Athena, Docker, Git, Bitbucket, Jira, Cypress.

• Freelance — Web Designer

Technologie Optic.ca Inc. *most recent client*

Full Shopify redesign for a fiber optic equipment company (~2,200 products, trilingual FR/EN/ES). Project being finalized.

- Designed the brand system, logo, brand guidelines and page mockups in Figma.
- Printed materials: business cards and rollups.
- Built the Shopify theme in Liquid (Online Store 2.0), with the multilingual structure (Shopify Markets) and product/variant metafields.
- Sole owner of design and integration, working directly with the client.

Tech: Figma, Shopify (Liquid, Markets), Adobe Creative Suite (Photoshop, Illustrator, InDesign).

About Me

Web designer and developer with 5+ years of experience, mostly in a video game marketing agency. I go from interface design (Figma, branding, mockups) to implementation: front-end (React, Next.js, Vue), CMS integration (WordPress, Shopify, Webflow) and some back-end.

I design with implementation in mind, which avoids back-and-forth between the mockup and the shipped product. I also handle technical SEO, accessibility and cross-device testing.

I use AI (Claude, Claude Code, GitHub Copilot) daily, with a critical eye on the output.

Montreal, Quebec. French (native), English (professional).

Skills

Design Figma, Adobe Creative Suite, branding and visual identity, wireframes, high-fidelity mockups, Design Thinking

Front-end HTML, CSS, JavaScript, TypeScript, React 19, Next.js 16, Vue/Nuxt, Tailwind CSS, React Query, Vite, some GSAP and Astro

Back-end Node.js, NestJS, REST APIs, MongoDB, AWS Athena (SQL), Docker

CMS & e-commerce WordPress, Elementor, Shopify (Liquid, Online Store 2.0, Markets), Webflow, cPanel, HTML email

SEO & analytics Technical SEO (meta tags, headings, internal linking, alt text), SEMrush, GA4, Hotjar, PostHog

Quality & tools Accessibility (keyboard navigation), Cypress, Git, Bitbucket, Jira

Content & management Web copywriting, documentation, project management and client communication
